To: The Commissioner for Patents

15

P.O. BOX 1450  
Alexandria, VA 22313-1450

Subject: Information disclosure statement Under  
37C.F.R. §1.56.

20

Dear Sir:

This is an Information Disclosure Statement in  
accordance with the duty to disclose information  
material to patentability under 37 CFR §1.56. The  
25 applicants wish to make of record the document listed  
on the accompanying form PTO/SB/08.

Since the IDS is filed after the mailing date of notice  
of allowance but before payment of the issue fee, and  
30 is accompanied by the fee set forth in § 1.17(p), consideration  
of the information disclosure statement is hereby requested  
according to 37 CFR §1.97(d). The prior art patents contained

10/24/2005 CNGUYEN 00000023 503105 10707802

01 FC:1806 180.00 DA

in the information disclosure statement were mailed from the Taiwan Intellectual Property Office on March 25, 2004 for a counterpart Taiwanese patent application. Applicants sincerely hope that the examiner can consider the items 5 contained in the information disclosure statement.

According to the requirement set forth in 37 CFR §1.98 and MPEP 609, applicants are submitting a copy of the following items contained in the IDS: Taiwanese 10 Patent #TW 443504 (published on June 23, 2001); #TW 238027 (published on January 1, 1995); #TW 454889 (published on September 11, 2001); #TW 458304 (published on October 1, 2001); and #TW 511721 (published on November 21, 2002).

15

In accordance with MPEP 609 III A(3), an English-language equivalent application may be submitted to fulfill the requirement for a concise explanation of relevance. Accordingly, an English language equivalent US patent 20 6,871,959 of the Taiwanese Patent #TW 511721 is listed on the accompanying form PTO/SB/08 to fulfill the IDS requirement.

A translation of the abstract of Taiwanese Patent 25 #TW 443504 is as follows:

The present invention provides a projection display device with a dual off-axis fan. The projection display device includes a dichroic combiner disposed 30 inside a housing in rear. A first modulation unit and a second modulation unit are disposed respectively on lateral sides of the dichroic combiner for modulating

different monochromatic lights derived from white light. After modulating, the different monochromatic lights are combined by the dichroic combiner and emitted out by a lens in front of the dichroic combiner.

5 The projection display device includes a first off-axis fan and a second off-axis fan, which a suction direction of air is perpendicular to a vent direction of air. The first off-axis fan and the second off-axis fan are respectively disposed on lateral sides of the

10 lens. The first off-axis fan and the second off-axis fan can respectively suck hot air from the first modulation unit and the second modulation unit and vent hot air backward to dissipate heat from other components. The present invention can recycle the air

15 by suction and exhaustion dissipated structure.

A translation of the abstract of Taiwanese Patent #TW 238027 is as follows:

20 The present invention provides a fixture structure of a fan, an interface card, and cables inside a computer casing. The fixture structure includes a main body and an air duct. The main body includes a plurality of first embedding sets. The air duct can be embedded on any first embedding set selectively. A positioning pin inside a fan container on the main body is inserted into a positioning hole of the fan. The fan can be fixed inside the fan container securely. Besides, a card slot can clamp the interface card securely. The cables inside the computer casing are well-arranged by a cable-collecting component or a cable-collecting clip

of the present invention.

A translation of the abstract of Taiwanese Patent #TW 454889 is as follows:

5

The present invention provides an improved muting structure of a power supply. A fan is disposed on an inner surface of a vent of a power supply. A wind channel of the centrifugal fan is aligned to the vent. Sound 10 absorbing material is applied on the inner wall of the wind channel or outside the fan. A suction hole of the centrifugal fan is hidden deeply inside the housing of the power supply and distant from the vent. Applying sound absorbing material ,and the centrifugal fan of 15 high air pressure, high air volume, and low noise can lower the noise produced by the power supply.

A translation of the abstract of Taiwanese Patent #TW 458304 is as follows:

20

The present invention provides a housing structure of a computer host. The housing structure includes a hollow casing. A host plate is disposed in a room of the hollow casing, and a power supply casing is wedged 25 inside the room of the hollow casing. A lateral part of the power supply casing is protruded from the hollow casing. A fan is installed inside the power supply casing. The power supply casing is wedged in the free surface of the hollow casing by a plate. An air duct positioned on a plate can cover the fan of the power 30 supply entirely so as to dissipate heat. The present invention can reduce the room inside the hollow housing,

meanwhile, it is adapted to utilize fans of different sizes, and increase heat dissipation by the reduced room of the hollow casing and air duct arrangement.
